

"How to go to the premises of a subcontractor to receive a tool or a machine without leaving your own company? (...) Thanks to the E-Assist system, the physical reception is replaced by a live presentation of the tools through a videoconference in immersion in the subcontractor's workshop (...) A tool of this type allows to save time in resolving issues but also reduces the intervention cost by avoiding going on site for small interventions".

Optimized video streams

Plug & Play

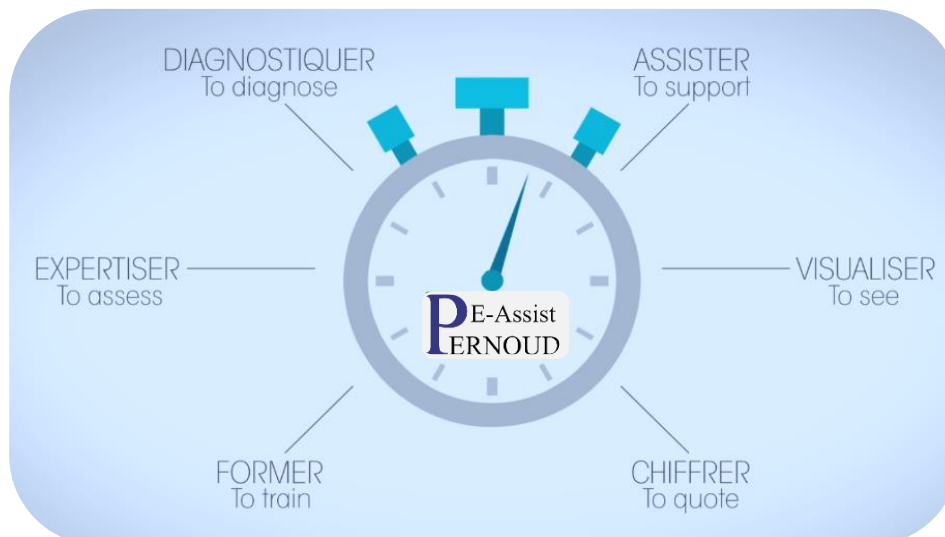

Remote and live diagnosis tool

Remote and live, the connected glasses equipped with a camera allow you to:

- Broadcast the user's field of vision to the different videoconference attendees, wherever you are in the world
- Participate in the tool trials, in order to be as close as possible to the equipment, to see it working also
- Expertise or diagnose a failure
- Obtain answers in live to the technical maintenance or costing questions
- Validate or accept work carried out at your subcontractor

A decision making tool
